BonAppetit.com

An online food delivery system.

It is a web designed primarily for efficient and easy delivery of food from various restaurants around the city. This system will allow hotels and restaurants to increase scope of business by reducing the labor cost involved. The system also allows to quickly and easily manage an online menu which customerscan browse and use to place orders with just few clicks.

SCOPE:

- This food delivery system simplifies the ordering process for both customers and restaurants.
- System presents an interactive and up-to date menu with all available options in an easy to use manner.
- Customers can choose one or more items to place an order which will land in the cart.
- At the end, customer gets order confirmation details.
- The Adminstrator of the website will be able to act as the owner of the website managing the site with required modifications and updates as and when required.
- A restaurant owner will also have an account where he/she has specific defined functionalities.

FUNCTIONALITIES:

Following are the functionalities designed in the website:

1. About us

This feature gives a brief idea about the website and its purpose. Through this feature, one can access all the required information about the application like Copyright, Terms and Conditions, How it works etc.

2. Registration

It involves registration of Customer,Restaurant owner into the webstie using their email id or phone number promting them to set a unique password for the account. After which their respective accounts get created. It will have basic details like email id, phone number, current location.

3. Login

It has 3 different kinds of Log in's available:

a) *Customer log in* :

Once user creates account, his/her account will contain user information which is accessible to user as follows :

• Personal information like Email id, Phone number, Location(current).
